PROFESSIONAL SUMMARY

Senior Full Stack Engineer and Framework Architect with 5+ years building enterprise web platforms and developer tooling. Lead architect of Nextly, an MIT-licensed Next.js framework. Currently leading backend architecture for a team of 8 engineers across 7 production environments serving 50K+ users. Deep expertise in modern Next.js/NestJS microservices, Python/FastAPI backends, and headless CMS ecosystems, with proven ownership of security, performance, and team delivery.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, PHP
Frontend	React.js, Next.js, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Shadcn/UI
Backend	Node.js, NestJS, Express.js, FastAPI, Flask, GraphQL, REST APIs
Databases	PostgreSQL (pgvector), MongoDB, MySQL, SQLite, Redis, Drizzle ORM, SQLAlchemy
CMS	Nextly, Payload CMS, Strapi, WordPress (Headless, Custom Themes, Gutenberg)
DevOps & Infra	Docker, AWS, GitHub Actions (CI/CD), Vercel, Coolify, Hetzner VPS, Microservices
Auth & Security	JWT, OAuth 2.0, RBAC, Field-level Permissions
AI & Data	Sentence Transformers, TF-IDF, spaCy, Scikit-learn

EXPERIENCE

Lead Backend Engineer & Release Manager | Revnix (fmr. Revnix Technologies)

Jan 2024 - Present | Haripur, Pakistan

- Rext AI (SaaS Platform):** Led the backend architecture for a multi-tenant content automation SaaS using Python, FastAPI, and SQLAlchemy. Developed robust async APIs and background jobs (APScheduler), managed complex relational data (PostgreSQL), and integrated external systems including LemonSqueezy billing, Shopify App Bridge, and WordPress REST APIs.
- 4RE Marketing Console:** Architected a high-performance marketing console and API backend using NestJS, Drizzle ORM, and PostgreSQL. Built a scalable synchronization engine to ingest external dealer and catalog XML feeds, resolving multi-source data claims and serving materialized products to a Next.js storefront.
- Nextly Framework (Flagship Project):** Architected and led development of an MIT-licensed, TypeScript-native Next.js CMS competing with Payload CMS. Designed the security-first auth system (custom JWT, OAuth, granular RBAC), multi-database adapter (PostgreSQL, MySQL, SQLite), and a dual schema builder.
- Platform Migration (21st Century & 4 Rivers Equipment):** Led a team of 4 engineers to migrate massive headless eCommerce platforms (handling 1,000+ SKUs and Stripe payments) to the Nextly CMS, cutting infrastructure costs by 95%.
- The Backyard:** Designed modular APIs and RBAC authentication with Drizzle ORM to build a custom CMS, which served as the architectural foundation and primary production stress-test for the Nextly framework.
- Team Leadership & System Reliability:** Lead 8 engineers managing 7 production environments serving 50K+ users. Automated CI/CD pipelines (Docker, GitHub Actions) and introduced structured logging and error tracking, reducing deployment effort by 70% and production incidents by 60%.

Full Stack WordPress Developer | Revnix (fmr. Revnix Technologies) *Feb 2022 - Jan 2024 | Haripur, Pakistan*

- **PCI Security Standards Council (WordPress VIP):** Engineered a highly scalable, multi-language, and multisite enterprise platform. Built complex custom Elementor widgets by extending core classes to avoid third-party plugin bloat, and integrated secure REST APIs to populate dynamic data.
- **Headless Architectures:** Built headless WordPress backends paired with Next.js frontends, enabling high-performance content delivery for editorial teams managing 500+ articles.
- **The National Pulse:** Built a custom WordPress theme for a news platform handling 100K+ monthly pageviews. Integrated Paid Memberships Pro with Stripe, Google Pay, and Apple Pay.
- **WP Aegis & WP Grit:** Built full WordPress sites utilizing modern Gutenberg block architecture and theme.json full-site editing, while training 3 interns on modern WordPress standards.
- **Performance Optimization:** Achieved 90+ Lighthouse scores across 10+ client sites using Redis caching and image optimization, cutting average page load times by 35%.

Frontend Engineer | Revnix (fmr. Revnix Technologies) *Mar 2021 - Feb 2022 | Islamabad, Pakistan*

- **UI Development:** Built responsive, SEO-optimized interfaces using React, Next.js, HTML, and SCSS for 8+ client projects.
- **Performance:** Reduced website load times by 40% (improving Time to Interactive from 6s to under 3.5s) via component optimization, lazy loading, and code splitting.
- **Component Libraries:** Integrated REST APIs and built reusable component libraries documented with Storybook, accelerating frontend velocity by 30%.

PROJECTS

SmartCourse - AI Course Recommendation Engine *Python, Flask, SQLite, Sentence Transformers*

- Built a dual-model AI recommendation engine supporting keyword-based (TF-IDF) and semantic search (all-MiniLM-L6-v2) to return highly relevant courses with 0-100% confidence scores.
- Designed a REST API managing session-based search history and integrated an NLP pipeline for text preprocessing and vectorization.

EDUCATION & CERTIFICATIONS

BS in Computer Science | Virtual University of Pakistan (Aug 2021 - Aug 2025)

Google Cybersecurity Professional Certificate | Google (Mar 2026)

AI For Everyone | DeepLearning.AI (Aug 2025)

Agile with Atlassian Jira | Atlassian (Nov 2025)

Automation and Modern Testing Tools | Board Infinity (Dec 2025)
